

## River Restoration (Tamarisk and Russian-olive) Program

(TRO)

### What is the program?

The TRO program is a cost incentive program focused on restoring river areas infested by tamarisk and Russian-olive. First year treatments, including biomass removal and first year herbicide re-sprout treatments, are paid for entirely by the program. Landowners are then required to commit to five years of follow-up treatments, documented by PWWMC/SPPRCD on an annual basis.

### Focus Area

This program is focused in the Hoehne/El Moro areas. Thus, landowners in these areas take priority.

### How do I sign up?

Landowners must contact PWWMC/SPPRCD and schedule a site visit. Landowners must allow mapping of tamarisk/Russian-olive (and any other noxious weeds) on their property. Additionally, landowners must fill out an application and plan under the guidance of the PWWMC Coordinator and/or SPPRCD Noxious Weed Technician.

### Basic Requirements:

1. Land must be within the boundaries of the Spanish Peaks-Purgatoire River Conservation District
  - a. Additionally, land ideally is located in the Hoehne/El Moro areas.
2. Mapping of noxious weeds on their property (this mapping data will be accessible by Las Animas County and the CO Department of Agriculture's Noxious Weed Program, but will not be available for public viewing).
3. Allow first year treatments to be done by contractors (heavy equipment operators and commercial applicators) through a SPPRCD bidding process.
4. Allow inspections by SPPRCD/PWWMC during the landowner's five year commitment time period.
5. NOTE: Additional funds might available for seeding/revegetation costs if deemed needed during the planning phase.

### Not sure if you have a noxious weed?

If you think you might have a noxious weed, please contact the Purgatoire Watershed Weed Management Collaborative Coordinator, Shelly L. Simmons or the SPPRCD Noxious Weed Technician, Donna Albertson to assist you with identification.
